The price conscious choice for your building!

BASE is a new complete favorable hardware series produced by d line.

As with all our d line products, form and functionality is important to us, and BASE by d line is no exception. The BASE by d line series is no replacement for any d line product, but is on the contrary a supplement for our already extensive hardware product range. With the introduction of BASE – d line is now able to offer a comprehensive variety of hardware products in different price ranges to accommodate the industry's need for several products but only one supplier.

The BASE by d line series consists of a wide range of hardware products such as a full range of door levers, suited for both the Scandinavian and European marked, different types of pull handles, door stops and flush pull handles, all designed to fit the hardware needs of both today and tomorrow.

BASE by d line is approved according to EN 1906 with a class 3 for considerably daily use and therefore we are able to offer our customers a 10 year performance guarantee on all BASE by d line products. The series is produced in satin stainless steel, Type AISI 304 which makes BASE by d line the perfect choice for both internal and external use in both private and commercial buildings.

BASE by d line Performance guarantee

10 YEAR PERFORMANCE GUARANTEE BASE by d line

10 year performance guarantee on all hardware products in the BASE by d line series!

At d line we are confident that our new range BASE meets the familiar d line quality, where function and quality go hand in hand. Therefore, we can stretch ourselves beyond the normal 5 year warranty by law (MNI - Building Act??) requires and offers 10 years guarantee on all Base hardware products as long as they respective mounting, service and maintenance instructions are met.

Service and Maintenance
BASE by d line is produced in AISI 304 satin stainless steel and is therefore suitable for use where the demand for quality and durability is needed. The products can be used both outside and inside, in both private and public buildings.

Function of levers, pull handles and fittings should be checked on a regular basis. If fittings are loose they need to be tightened.
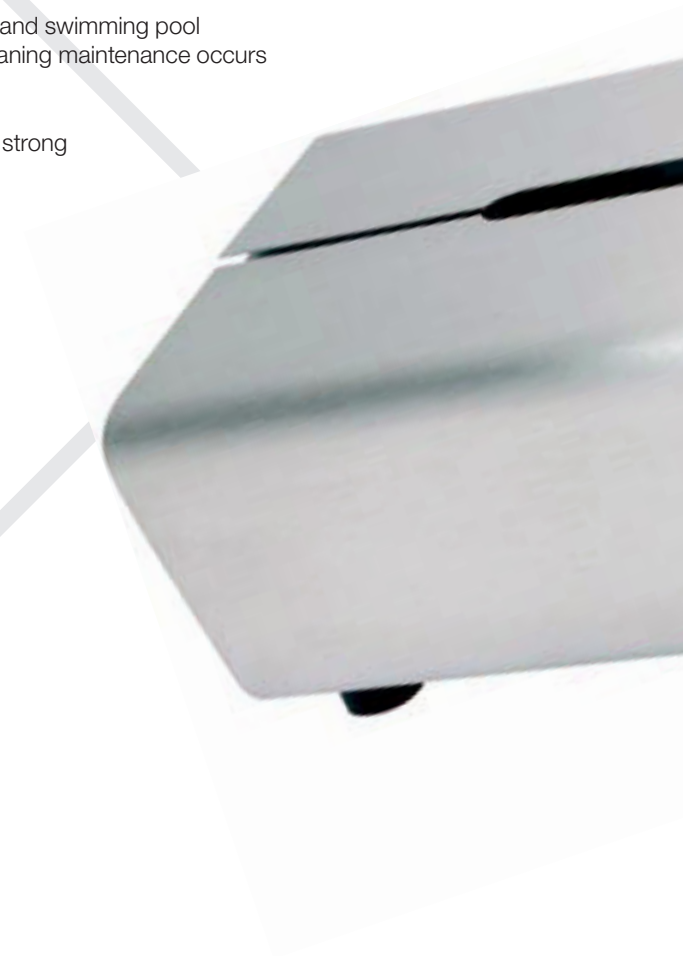

Cleaning is carried out to restore the original surface appearance, prevent corrosion and maintain hygienic conditions. If spots appear on the surface it is not due to the stainless steel, but to impurities in the water, the air or to cleaning agents that have not been thoroughly removed from the surface.

Cleaning Technique
It is important to clean stainless steel regularly. Initially, wash down the surface using soapy water or a mild detergent. Always thoroughly rinse the cleaning agent away with clean water. To complete the cleaning procedures dry/polish the item with a soft, dry cloth.

Within aggressive conditions, such as offshore, marine and swimming pool environments, it is especially relevant to ensure that cleaning maintenance occurs regularly.

Please do not use scouring powders, steel wool or any strong abrasive materials as these may damage the surface.
